Education

Bachelor of Science in Computer Science, 2025
Universidade Federal de Pernambuco (Federal University of Pernambuco)

Summary

Software Engineer with 5 years of experience building high-impact products across mobile, frontend, and backend systems in both startups and large-scale environments. Proven track record of driving business results, including a 17% increase in paying users, by delivering scalable, performant, and well-tested solutions. Experienced in iOS (Swift), Flutter, and backend development with Golang, with a strong focus on code quality, system design, and maintainability. Solid foundation in algorithms and data structures, with competitive programming experience (Top 40 Latin America). Known for strong ownership, effective communication, and collaboration in fast-paced teams, actively contributing through code reviews and technical discussions. Fluent in English and Portuguese, with working proficiency in French and Italian. Remote-friendly.

Work Experience

Software Engineer - Uber (Mar, 2025 - Present)

- Developed iOS features for the Identity Verification platform using Swift and Thrift, enhancing security for millions of riders and drivers.
- Designed and implemented a flexible verification flow system, enabling dynamic step configurations and improving adaptability of identity checks.
- Built backend components in Golang, including Server-Driven Features (SDF) to control frontend UI/UX dynamically from backend services.
- Authored technical design documents covering new system architectures, trade-offs, and rollout/rollback strategies for feature launches and deprecations.

Software Engineer - Rei do Pitaco (Jun, 2024 - Mar, 2025)

- Implemented an A/B test that optimized user experience and increased the paying user base by 17%.
- Led a high-priority, compliance-driven project under strict deadlines, preventing a potential $6M loss and ensuring continued operation in Brazil.
- Collaborated with stakeholders to gather requirements, break down tasks, and prioritize critical deliverables across mobile (Flutter) and web (React/TypeScript).
- Contributed to a Backend-Driven UI architecture, enabling dynamic frontend rendering based on backend-defined layouts and configurations.

Software Engineer - Elife Monitor (Nov, 2022 - Jun, 2024)

- Developed chatbot solutions using TypeScript and PostgreSQL, integrating with client APIs to automate and scale customer interactions.
- Leveraged AI techniques to improve conversation quality, enabling more natural and effective user engagement.
- Built and executed large-scale messaging workflows, reaching thousands of users with targeted communications.
- Worked in a Kanban environment to deliver iterative improvements and optimize development processes.

Projects

Fonli

Fonli is a full-stack mobile application I am developing using Flutter for the frontend and Golang for the backend, focused on personalized language learning powered by AI. The platform generates customized exercises based on each user's interests, such as hobbies, professions, and daily activities, creating a more engaging and relevant learning experience. I designed and implemented scalable APIs and adaptive learning logic to tailor content dynamically, combining user preferences with AI-driven recommendations to improve retention and usability.

Movie Night

Movie Night is a mobile application I built with Flutter and published on the Google Play Store, designed to help users track and choose movies recommended by friends and social media. The app integrates with the TMDB API to provide detailed movie information, including descriptions, ratings, and posters, while organizing user preferences into a personalized list. It streamlines the decision-making process by helping users quickly discover what to watch and where to stream it, improving the overall content discovery experience.

Skills

Hard-skills:

React, Javascript, Typescript, Swift (iOS), Flutter, NodeJS, Golang, REST APIs, gRPC, Firebase, Microsservices, PostgreSQL, CI/CD, Kanban, Scrum, AWS.

Soft-skills:

Proactive, Team Collaboration, Clear Communication, Continuous Learning, Creative, Leadership, Fluent English, Native Portuguese, Intermediate French and Italian.
